#### Preconditions to participate:
Postgraduates of urban planning and design or geography proven by having accomplished the courses of the previous semesters of the Double Degree Master Programme.

#### Learning outcome:
In this course students will be guided to analyse the intrinsic values of urban spaces. The relationship between urban recreation, public space, urban heritage, cultural capital, cultural industry and tourism development will be highlighted.  
**Knowledge:** As a theoretical framework the students learn linking field observations with subsequent planning. They gain knowledge and understanding of social structures and changes with relevance for planning.  
**Competences:** The students are able to analyze a project of park or open space in a multi-perspective way based on human recreation needs and behaviour approaches in a team. Based on previously acquired skills in methods of behaviour spatial and tourism analysis, they have gained profound know-how in analyzing the potentials of a project with regard to its contribution to ameliorate urban image and its economic, social and cultural benefits. They are familiar with multi-level assessments of a project’s impacts on the life quality of citizens and urban image.  
**Skills:** The students apply different dimensions in the analysis and value assessment of public urban spaces. They develop ideas how improve the quality of public urban spaces. They are trained in various methods in theory and practice, such as conducting questionnaires. They are able to analyze and present their findings and evaluations in an academically convincing manner.
